

Medical card · auditor export guide

For Acme Trucking LLC · audit window Nov 2025 - Apr 2026

Medical-card violations are the #1 driver-related citation in CSA. An auditor will sample drivers + check whether (a) the cert was current at every moment of operation, (b) the examiner was on the NRCME at the time of exam, (c) CDLIS showed certified status.

I · PER-DRIVER PULL

1. **Current medical examiner's certificate** · paper copy + scan in driver file
2. **Prior medical certificates** · for the audit window · in chronological order
3. **NRCME verification log entries** · examiner name + registry ID + date verified · for each exam
4. **CDLIS status confirmation** · screenshot or printout showing "certified" with the corresponding effective date
5. **Short-cert documentation** · for any 1-year or 3-month card · the underlying condition + treating-provider letter + compliance evidence (CPAP report, A1c result, BP log)
6. **FMCSA exemption letters** · for ITDM, vision, hearing, or seizure exemptions if applicable

II · WHAT THE AUDITOR LOOKS FOR

- **Gap in coverage** · any day where the driver was on the road without a valid card
- **Examiner not on NRCME at time of exam** · the registry is real-time · check at the time of exam, not the time of audit
- **CDLIS "not certified"** · paper card was current but state wasn't updated · acute OOS
- **Short-cert ignored** · 3-month card became 18 months · no renewal record
- **ITDM driver without exemption** · insulin-treated driver still operating without §391.46 exemption
- **Vision / hearing exemption expired** · annual reverification skipped

III · THE VERIFICATION LOG FORMAT

DRIVER	EXAM DATE	EXAMINER NAME	NRCME #	VERIFIED BY + DATE	CERT EXPIRES
_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____

Maintain a per-carrier log AND a per-driver file entry. The cross-reference is what defends the program in an audit.

IV · THE X3 COMPASS MEDICAL-CARD AUDIT PACKET

1. Navigate to **Audit Export** · select scope **Medical Cards**
2. Select drivers + window
3. Click **Generate audit packet** · X3 builds: per-driver cert history, NRCME verification log entries, CDLIS status snapshots, exemption letters, short-cert compliance evidence
4. The packet has version + content hash · audit-traceable

The verification date matters as much as the cert itself. A driver presents a card from an unregistered examiner · if you didn't verify NRCME at the time, you don't have a valid medical certification. The §391.23(m) finding is one of the most-cited in any DQF audit.
