

MVR · auditor export guide

For Acme Trucking LLC · audit window Nov 2025 - Apr 2026

Investigators check MVR records to verify the annual cadence (§391.25), the driver self-certifications (§391.27), and that the carrier acted on what the MVRs showed. Findings here roll up into Driver Fitness BASIC + the §391.51 DQF citation count.

I · THE STANDARD MVR PULL (PER DRIVER)

1. **Initial MVRs at hire** · every state licensed in the 3 years before hire · within 30 days of hire
2. **Annual MVRs** · every state licensed in the 12 months prior to each annual review · one per year of employment
3. **Driver's §391.27 annual self-certification of violations** · for each year
4. **§391.25(c) signed annual review note** · for each year
5. **Continuous monitoring alerts** · if you use a vendor · receipt + carrier action for each alert
6. **Roadside inspection reports** involving this driver · for cross-reference

II · WHAT INVESTIGATORS CROSS-REFERENCE

SOURCE A	SOURCE B	WHAT GETS FLAGGED
MVR conviction	Driver's §391.27 self-cert	Driver omitted a conviction · falsification
MVR conviction	§391.25(c) annual review note	Carrier saw it but did nothing · failure to act
Roadside inspection violation	MVR conviction record	Conviction missing from MVR · DMV

SOURCE A	SOURCE B	WHAT GETS FLAGGED
		reporting lag · update needed
License status "suspended" on MVR	Driver's HOS or trip records	Driver operated CMV during suspension · acute violation
License "not certified" on CDLIS	Driver's medical card on file	Card on file but state not updated · driver is OOS

III · MOST COMMON FINDINGS

- **Missing annual MVR** for a year of employment · classic §391.25 violation
- **MVR pulled from only one state** · driver had licenses in 2+ states during the period
- **Driver self-cert missing** · annual MVR was pulled but the driver's §391.27 form isn't in file
- **Annual review note missing** · MVR + self-cert there, but no §391.25(c) note documenting the review
- **Disqualifying offense ignored** · MVR shows a §383.51 disqualifying offense, but no record of removal from CMV operation

IV · THE X3 COMPASS MVR AUDIT PACKET

1. Navigate to **Audit Export** · select scope **MVR**
2. Select drivers (all or sampled)
3. Click **Generate audit packet** · X3 builds a per-driver PDF: initial MVR(s), annual MVRs, §391.27 self-certs, §391.25(c) review notes, continuous-monitoring alerts
4. The packet has a version + content hash · matches the audit ledger row

The cleanest MVR audit defense is the boring one: same cadence, same documents, same review form, every driver, every year. The fanciest continuous-monitoring stack means nothing if you can't show the regulatory baseline.
